US-09-252-991A-8062/c
Sequence 8062, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AMINO ACID SEQUENCES RELATING
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
                                                                                                                                                                                                                                                                          2503
                                                                                                                                                                                                                                                                                                                                                         2446
                                                                                                                                                                                                                                                                                                                                                                                                                                        2404
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2365
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2305
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2074
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1981

This clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M University BAC Center library was constructed at Texas A&M University BAC Center Mixed Sexes of Larvae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hong, Y.S., Hogan, J.R., Wang, X., Sarkar, A., Sim, C., Loftu, C., Huff, E.R., Carlile, J.L., Black, K., Zhang, H.-B., Gar and Collins, F.H.

Construction of a BAC library and generation of BAC end sequence-tagged connectors for genome sequencing of the malaria mosquito Anopheles gambiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             partial digest.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the UNA is derived from mixed sexes of larvae. The BAC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Construction of a BAC library and generation of BAC sequence-tagged connectors for genome sequencing of malaria mosquito Anopheles gambiae Mol. This clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit
                                                                                                                                                                                                                        Construction of a BAC library and generation of BAC sequence-tagged connectors for genome sequencing of malaria mosquito Anopheles gambiae Mol. Genet. Genomics 268 (6), 720-728 (2003)

This clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain to NNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M Universeity BAC Center Dartial digest.

Seq primer: M13 For Class: BAC ends.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Other_GSSs: AG-ND-119L15.TR

This clone is from an A. gambiae BAC library (ND-TAM) provided by

F.H. Collins and sequenced by The Institute for Genomic Research

(TIGR). The BAC library was generated from A. gambiae PEST strain

DNA. All DNA was extracted from newly hatched first instar larvae

to minimize the inclusion of DNA from microorganisms that inhabit

the gut. The DNA is derived from mixed sexes of larvae. The BAC

library was constructed at Texas A&M University BAC Center

University, College Station, Texas 77843-2123, USA using a HindIII

Seq primer: M13 Rev

Class: BAC ends.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    90
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 70
                                                                                                                                                                                                                       partial digest.
Seq primer: M13 Rev
Class: BAC ends.
                                                                                                                                                                                                                                                                                   This clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M Universty BAC Center
                                                                                                                                                                                                                                                                                                                                                                                                                     9712 Medical Center Dr.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /clone lib="LRH (Lin Rhodamine and Hoechst dye)"
/note="Vector: pZL1; Site 1: SalI site; Site 2: EagI site;
LRH library was constructed from CDNA of primary bone
marrow cells depleted of lineage-committed cells and
enriched for primitive cells by FACS sorting for cells
with low level staining with rhodaminel23 and Hoechst
33342 dyes. CDNA from 5000 cells derived from 30 mice,
5000 cells were were directionally cloned into SalI-EagI
restriction site of the (ZipLox (Gibco BRL). The ligated
cDNA fragments were transformed into BHDB host cells.
The original library had an initial plating complexity of
1.44X107 clones. "

/note="Site_1: Xba I; Site_2: Xba I; The vector was
digested with XbaI and one nucleotide was added by fill in
in the recessive 3' end. The genomic DNA was nebulized,
end repaired, adaptor ligated and size fractionated using
sephadex The resulting fragments were between 0.8 and 3
kb and were cloned into the vector (.x/y reads in M13mp19,
b/g reads in pUC19). The same ligation was transformed in
either JM107 or DH5a."
